Methodology

1. **STP** - Segmentation, Targeting and Positioning (STP) is a strategic approach to marketing strategies that demonstrate a link between the overall market and the marketing strategies a business implements to compete with the market. (Shaw, 2019)

2. **SWOT Analysis** - SWOT (Strength, Weakness, Opportunities, Threats) is a form of strategic analysis that identifies and analyzes the internal strengths and weaknesses and the external opportunities and threats that influences the future direction and success of a business. (HOANG, 2018)

3. **4 Ps of Marketing** - The four Ps of marketing are key considerations that must be reviewed and implemented to successfully market a product or service. 4 Ps refer to Product, Price, Place and Promotion. (Twin, 2022)

4. **Product Mix** - The product mix refers to the total number of product lines and individual products or services offered by a company. (*Product mix strategy* 2022)

5. **BCG Matrix** - The Boston Consulting Group (BCG) is a planning tool which uses graphical representations of a company's products and services to help the company to decide which product or service should be kept, sold or invested more in. (Hayes, 2023)

6. **Force Field Diagram** - It is an organization planning tool that deals with the forces for and against the change. (HOANG, 2018)

7. **Porter's Five Forces** - Tool that identifies and analyzes 5 competitive forces that shapes a company and helps determine the strengths and weaknesses of the company. (Team, 2022)

8. **CSR - Corporate Social Responsibility** - Refers to a business model that holds a company to be socially responsible and accountable to itself, its stakeholders and public. (Fernando, 2022)

Introduction to Kellogg's

Kellogg is a 110-year-old multinational corporation and food manufacturing and selling company headquartered in Michigan, US. It is best known for its breakfast foods and cereals. It was founded in 1906 by Will Keith Kellogg and John Harvey Kellogg. The current CEO of Kellogg's is Steve Cahillane. Kellogg's manufactures its products in 19 countries and markets them in more than 160 countries, dominating 40% of the US ready-to-eat market and having a yearly sales volume above US $6 billion.

Kellogg's mission statement is "**nourishing families so they can flourish and thrive"** (*Nurturing Our Planet*, 2022) and its purpose is **"**A **good and just world where people are not just fed but fulfilled"** (*Nurturing Our Planet*, 2022). It has a diverse product portfolio, including products from different brands like Pringles, Cheez-it, Special K, Kellogg's frosted flakes, Pop-Tarts, Rice Krispies, Eggo, and many more. By 2000, 53% of Kellogg's sales came from cereals, 32% from snacks, and 15% from other products like beverages. Today, the company sells more than 292 products across 30 brands in various countries around the world. The company has a workforce of 31,000 employees and records net sales of $14.2 billion.

Kellogg's in the Indian market

During the 1980s, Kellogg's was a market leader in the US, holding 40% of the market share with more than $6 billion in sales. However, during the 1990s, competition got tougher in the US due to competitors like General Mills adapting strategies like product development and introducing brands like the Cheerios brand, which gained popularity, decreasing the sales of Kellogg's.

In 1991, India went through economic liberalization and removed its barriers to international trade. Three years later, in 1994, taking the opportunity, Kellogg's invested $65 million to launch cornflakes. With a population of 950 million, Kellogg saw the Indian market as being very promising in terms of sales and profits. If Kellogg's could attract Indian consumers on average, 2% of the Indian consumers could generate more revenue compared to the US market. However, when it entered India, the investment strategy failed, and as a result, it attracted less than 0.01% of the total population of 950 million in India.

Kellogg's had taken a simplistic approach to identifying the Indian market. Kellogg's assumed that the total Indian population (950 million) would have cereals, whereas the per capita consumption of breakfast cereals was low - 2 grams per person per year - compared to the 5 grams per person per year globally (*Kellogg's – Failure to Success Story | the CEO Story*, 2022). Cereal was an unpopular breakfast option, hence the breakfast market in India was mainly dominated by international brands like PepsiCo and Kellogg's. The popular Indian companies in the cereal market were Bagrry's India Ltd. and Mohan Meakin. Kellogg's India Ltd. had the first-mover advantage and was the undisputed market leader with a 37% value share in 2014.

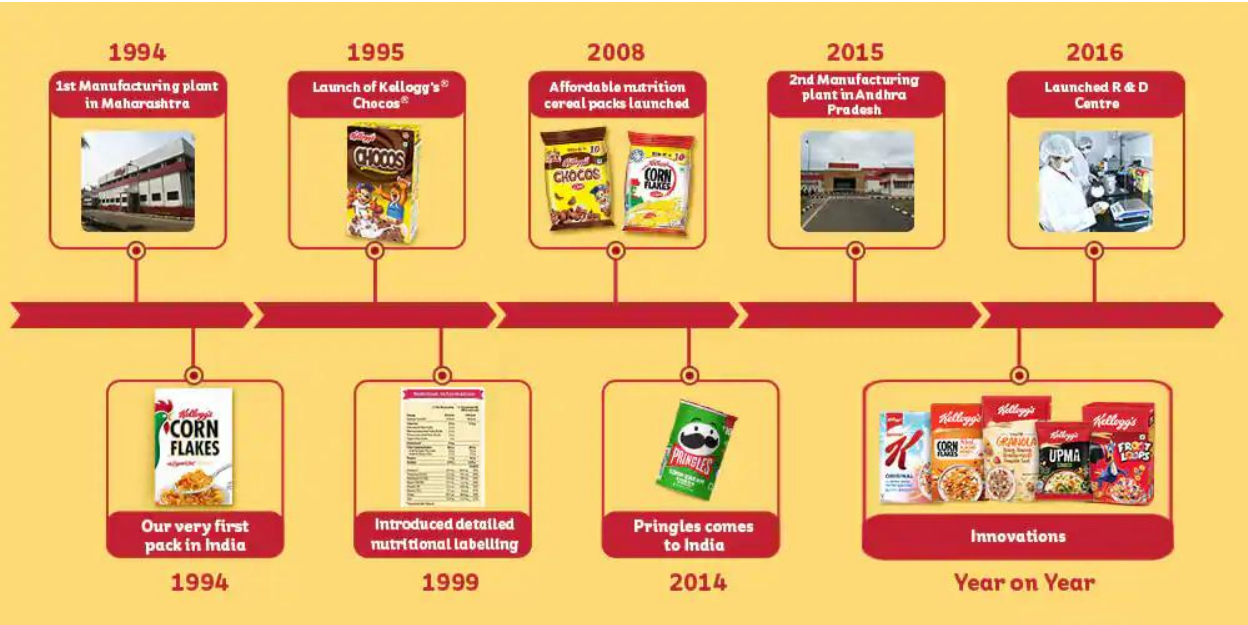

Figure 1 Timeline of Kellogg's in India (Benefits of Breakfast, 2014)

In 1994, Kellogg's stepped into India by opening a manufacturing plant in Maharashtra. In 1996, it launched Chocos, targeting the nutritional needs of growing children. In 1999, Kellogg's launched "Project Red Alert." The iron content of Kellogg's was increased to address and deal with the issue of iron deficiency in children. Kellogg introduced INR 10/- SKUs in 2018 to make nutritional food more affordable for consumers. In 2014, to diversify the product portfolio, it brought Pringles to India. In 2020, it expanded by customizing the India-centric product Kellogg Upma, targeting the "in-between-meal" segment, and K-energy bars, targeting the snack segment.

Entering the Indian ready-to-eat cereal market had many challenges, like the cultural factors and eating habits of Indians. Indians are used to having freshly made food rather than processed food. Customers are price conscious, so low-cost traditional breakfast options are readily available.

Breakfast cereal market in India

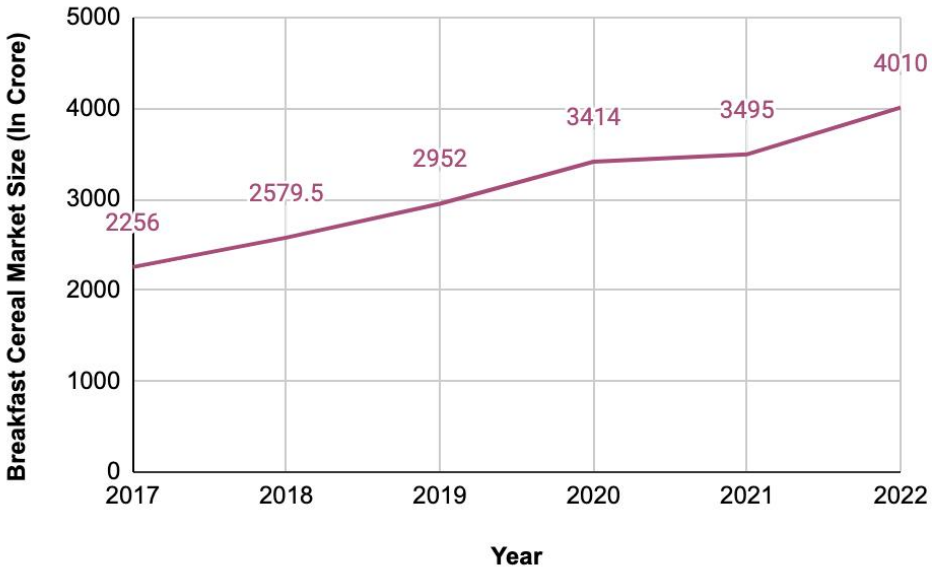

Figure 2 Breakfast cereal market size in India (Singh, 2022), (Singh, 2021)

India did not have a culture of breakfast. For Indians, breakfast was generally combined with lunch, called "brunch." The majority of Indian households preferred freshly cooked traditional breakfast. Ready-to-eat cereal options were not widely available. However, with lifestyle changes and increased health consciousness, consumers, especially in urban areas, preferred ready-to-eat, pocket-friendly cereals.

Cereals were considered a niche market, but in the recent five years, people have moved towards a healthy diet, especially after the COVID-19 pandemic. The increased work-from-home and female employee numbers over the past year have led to cereals becoming more popular in the industry. The growth rate of the breakfast cereal segment in the country almost doubled during the pandemic. From the 11–12 percent growth that the category was witnessing in pre-pandemic times, it has now moved to 18–20 percent, driven by the trend towards convenience foods. (Singh, 2021). New startups are trying to disrupt the market by adding more Indian touches to their products. Tata Consumer Products offers Ragi Bite cereal

and Millet Muesli. Slurrp Farm offers products such as organic millet oat porridge (a suji substitute) and organic ragi and rice cereal. To be competitive, well-established companies such as Kellogg's also launched products like Froot Loops.

The cereal market in India was worth Rs 2246 crore in 2017 and reached Rs 3495 crore in 2021. It is estimated by Euromonitor International, a UK based global market research firm, that the cereal market in India is likely to reach Rs 4010 crore in 2022.

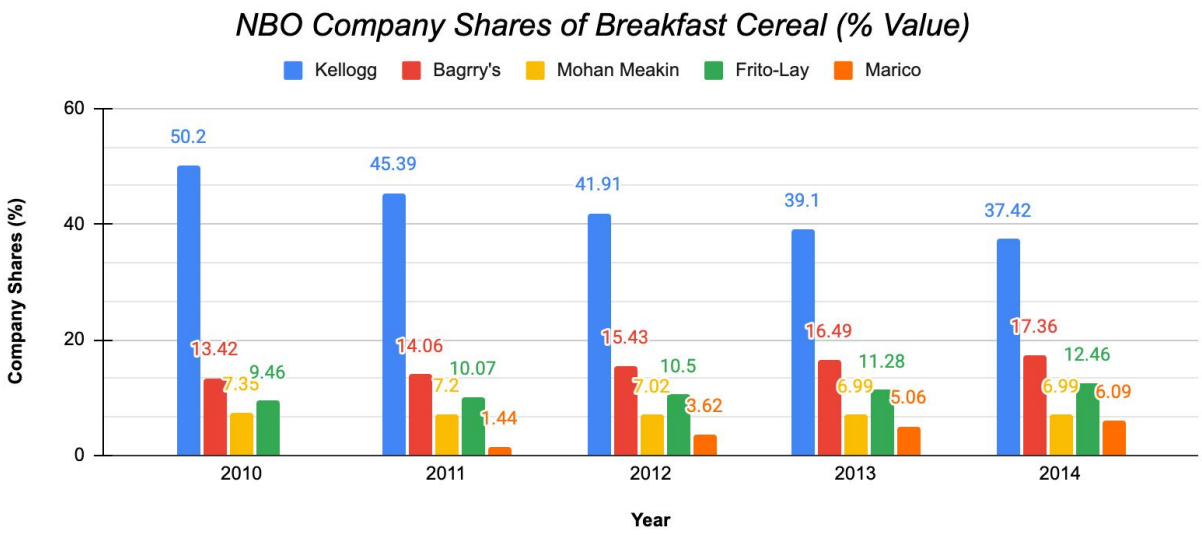

Figure 3 Company shares of different breakfast cereal companies (Prachi Gupta et al., 2018)

The initial sales of Kellogg's were a result of the one - off purchases. Cereals was a new category for the Indians hence, the products were bought out of excitement leading to a lower return rate. Moreover, the initial pricing Kellogg's offered to the Indian consumers also affected the return rate.

Force Field Analysis

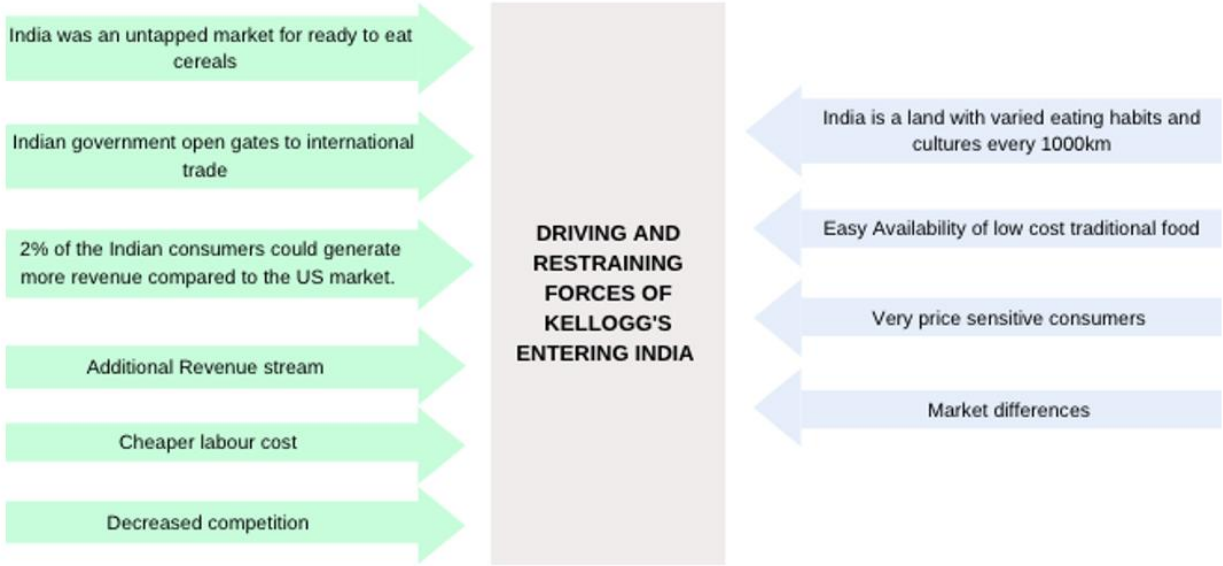

Figure 4 Force field analysis of Kellogg's (Jha, 2016), (Bolton, 2012)

A major reason why Kellogg's entered India was because India was an untapped market for the ready-to-eat cereal category. In 1994, when the Indian government opened its gates to international trade, Kellogg's had an opportunity to enter India. 2% of the extremely diversified population of India could generate more revenue compared to the entire US market. However, as India is a land with varied eating habits, there was an easy availability of low-cost traditional foods, which posed a threat to Kellogg's.

SWOT Analysis of Kellogg's

Strength	**Weakness**
Kellogg's has a worldwide presence, offering its products in more than 180 countries. This provides Kellogg's with growth opportunities and access to new markets. Kellogg's has a large workforce, with 3000 employees in India. Kellogg's has a strong CSR in India like Kellogg's feeds 375 million people in need with food donations and expanded child feeding programs.	In the past, Kellogg's had marketing campaigns that created a negative brand image. In order to promote its brand, it ran advertisements criticizing traditional Indian food and claiming it was unhealthy. This resulted in negative word of mouth. Kellogg's products are mostly available in metro cities whereas most of the Indian population live in villages or Tier II cities.
Opportunities	**Threats**
New product innovations can help Kellogg's stand out from its competitors. Kellogg's has a variety of products for children and women; however, it has not considered cereals for men. The company can innovate new products for the men's segment. The breakfast cereal market in India is expected to grow by 7.82% (CAGR 2023-2027) (*Breakfast Cereals - India | Statista Market Forecast*, n.d.)	Kellogg's is facing a lot of competition from the local restaurants and ready-made food. As stated before, Indians are more used to having a heavy, freshly made breakfast in the morning than packaged food. Another potential threat to Kellogg's is that Indian consumers are price-sensitive.

PESTEL Analysis of an International Company Kellogg's entering India

Political Factors
India has a stable democracy with political equilibrium. In 1990 the Indian government opened doors for international trade (Jha, 2016). Kellogg's found India to be profitable to set up its operations.
Economic Factors
India has a developing economy. It has low labor and operational costs. India has special economic zones which offer incentives and tax exemptions. The increasing GDP also provides growth opportunities of businesses.
Social Factors
India had a population of 950 million. 2% of the entire Indian population could generate more revenue than the entire US. Kellogg's entering India was considered beneficial because it created a lot of employment. As India is a land of different cultural diversities Kellogg's had to use efficient marketing strategies to get a foothold in India.
Technological Factors
With a rapid growth in the technological industry in India the use of technology in different sectors is also increasing. Automation in the food industry was increased with Kellogg's entry. It is estimated that more research and development would enable more technological advancements in many industries in India.
Environmental Factors
As a part of its corporate social responsibility Kellogg's has taken initiatives for proper waste

management and CO2 emission. It claims that it will be using completely 100% reusable, recyclable or compostable packaging by the end of 2025 (*Benefits of Breakfast*, 2015). It reduced 50% carton boxes to pouches and ensured that 100% volume plastic generated is recycled. By 2021, 60% of energy consumed at Taloja plant would be from renewable sources.
Legal Factors
India has flexibility for MNC to establish itself in India, open a brand, or sign a limited liability partnership. However, there are certain rules in India that are set by the food corporation of India regarding the food and packaging for all companies operating in the food industry. Kellogg's abides by all the laws which makes it a trusted company for Indians today.

STP Segmentation, Targeting and Positioning

Segmentation
Segmentation refers to the division of the potential market in order to understand the needs and wants of the consumers. Segmentation can be done by geography, demography, behavior, or psychology. In India, Kellogg's was viewed as a product for the upper middle class or upper class. It divided its consumers by gender and age. The company offered products targeting children by providing different packaging and different food shapes.
Targeting
Kellogg's uses differentiated marketing, to meet the needs of different consumers. (Pathan, 2020)

● Children - Chocos, Frootloops ● Oats and Muesli - Alternative for cornflakes, caters to the health conscious ● Young working generation - Special K
Positioning
Positioning aims to help a brand stand out from its competitors. Kellogg's positioned its cereal as a sweet, nutritional, and healthy breakfast in western countries. It was originally positioned as a breakfast item, but in India, it was positioned as an evening snack for children.

4P's of Marketing

Product

The good or service that is marketed to meet the needs and wants of the customers. Kellogg's launched its products in India in 1994 with an initial offering of cornflakes, basmati rice flakes, and wheat flakes. Even though Kellogg's entered the market with quality products, it miserably failed as it did not customize the products and offered the Indian consumers the same products it offered in the US and other countries. As a result, the flavors of the product did not match the cultural and taste preferences of the Indian consumers. Another challenge Kellogg's faced was, in western nations, milk is generally consumed warm or lukewarm, whereas in India, milk is likely to be consumed when it is boiling hot. Hence, when the consumers initially tried Kellogg's in boiling hot milk, the flakes became soggy, creating a huge disconnect between the Indian consumers and Kellogg's.

Product revised strategy

After the failure of its products, Kellogg's considered the cultural and taste preferences of Indian consumers and launched India-centric products. Chocos and Frosties were introduced in 1997. This product development strategy resulted in a boost in sales. Following the success of its products Chocos and Frosties in 1998, the Mazza series (almond-shaped corn breakfast cereal) was introduced in three flavors: rose, mango, and elaichi. In 2000, it launched Iron Shakti with a concentration on health, and adding to its success, it added a Special K Plus variant targeting females and low-fat breakfast.

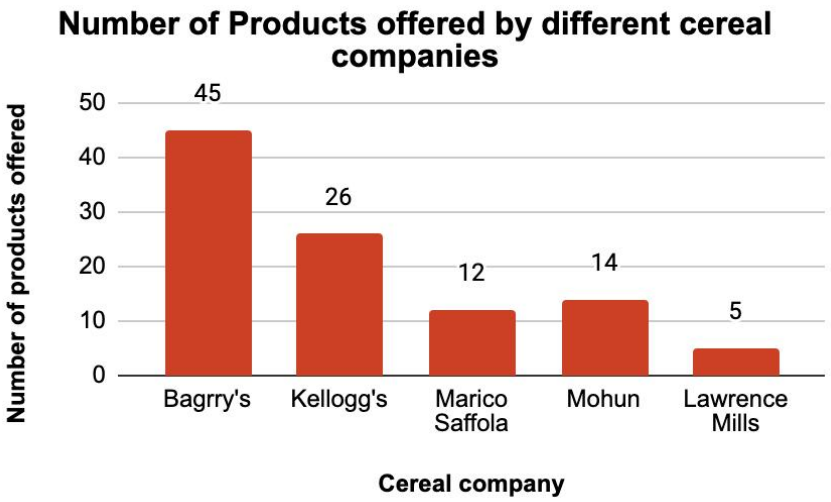

Figure 5 Number of products offered by different cereal companies (Bagrry's | Buy Healthy Breakfast, Oats and Brans, n.d.) (Kellogg's Products - Healthy, Fortified & Fibre Rich Cereals, 2022), (Buy Saffola Online at Best Price in India - Saffola Stores, n.d.)

Kellogg's offers almost 26 products to its Indian consumers. In comparison to other companies in the cereal industry, it is one of the most competitive brands and offers a variety of products to its Indian consumers.

Price

Price refers to the amount a customer pays to purchase the product. Kellogg's products are worth twice as much as Mohan's, its sole domestic competitor. In 1994, where a 450-gram packet of Kellogg's cost Rs 63, a 500-gram packet of Mohan's cornflakes cost Rs 33, which meant a Kellogg's product was 33% more expensive than its competitor (Jha, 2016). Kellogg's is well known in its home country-US, where it has 70% of the market share in the cereal industry. The popularity and increased consumption rates make Kellogg's products cheaper with less quantity in their home country.

Figure 6 Price of 479g of Special k cereals in US is $3.88 (Pathan, 2020)

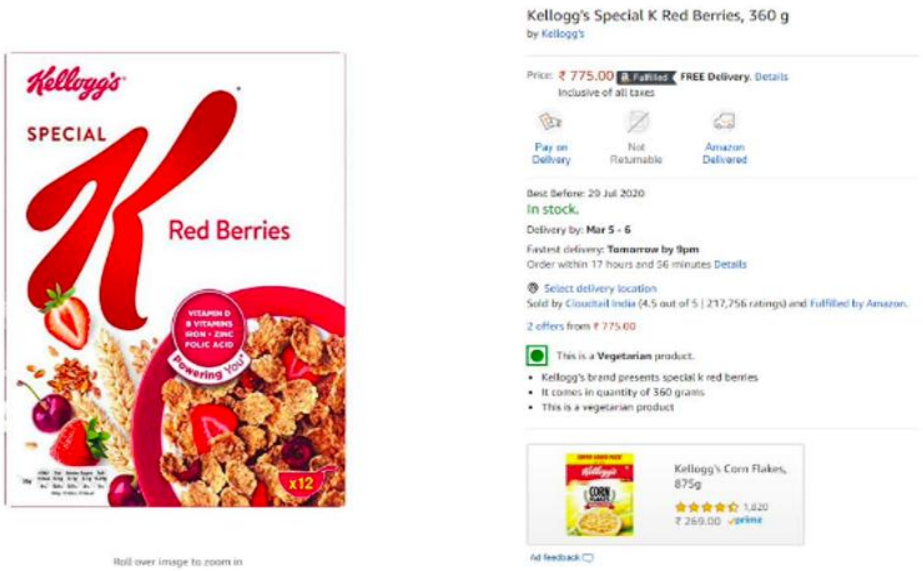

Figure 7 Price of 360g of special k cereals in India is $10.61 (Pathan, 2020)

Kellogg's concluded that despite reaching $70 million in sales (in March 2013), Indian consumers are extremely price sensitive. With a recent revenue of $138 million, it has only reached 3-4% of households (Pathan, 2020).

Brand	Quantity	Price (Rs)	Price (USD)
General Mills	318 gm	750	10.28
Monsoon Harvest	350 gm	260	3.57
Nestle Plus	475 gm	157	2.15
Percy	340 gm	449	6.16
Post	311 gm	1099	15.07
Soulfull	1000 gm	499	6.84
Weetabix	450 gm	399	5.47
Bagrry's	800 gm	310	4.24
Kellogg's India	360 gm	775	10.63
Kellogg's U.S	479 gm	283	3.88

Figure 8 Kellogg's Indian competitor pricing through amazon.in (Pathan, 2020)

Price Revised Strategy

Indian consumers are generally directed towards saving cost in most possible ways; hence, consumers were less likely to buy Kellogg's products. Kellogg later reduced the price of its products, replaced the glossy cardboard packaging with pouches, and introduced wider ranges of packs at different available sizes. It attracted consumers due to consumption patterns and purchasing power. Its main draw was the 500-gram family pack, which had a 20% reduction in price.

Place

Place refers to the distribution channels used to get the product to the customer. When Kellogg's launched its products in India, there were complaints that the products were not available in many cities. It was only available in most of the metro areas.

Place Revised Strategy

Kellogg's initially launched its products in metropolises, forgetting that the majority of the population of India resides in villages or Tier II cities. It launched its products in 60 cities, making them available to the majority of the population, and opened approximately 40.000 outlets across India since 1994 because of the new strategies it employed. This helped increase sales and penetrate the larger customer base.

Promotion

Promotion refers to the strategies used to persuade customers to buy a product. Kellogg's initial promotion strategy was to suggest that Indian breakfasts are unhealthy and that Kellogg's products are a healthier alternative. Through it, they diverted from their main motive, which was "fun and taste," and indirectly blamed Indian eating habits. It positioned it as a substitute for the Indian breakfast. However, Indian breakfasts like dosas and idlis provide a feeling of fullness that Kellogg's couldn't provide, as many consumers still felt hungry despite having cornflakes for breakfast.

Promotion Revised Strategy

Kellogg's new strategy included repositioning its products as a fun brand and removing the "premium brand" label. It even used promotion techniques like sponsoring school programs and associating itself with the JWT (J. Walter Thompson) ad agency.

Product mix of Kellogg's India

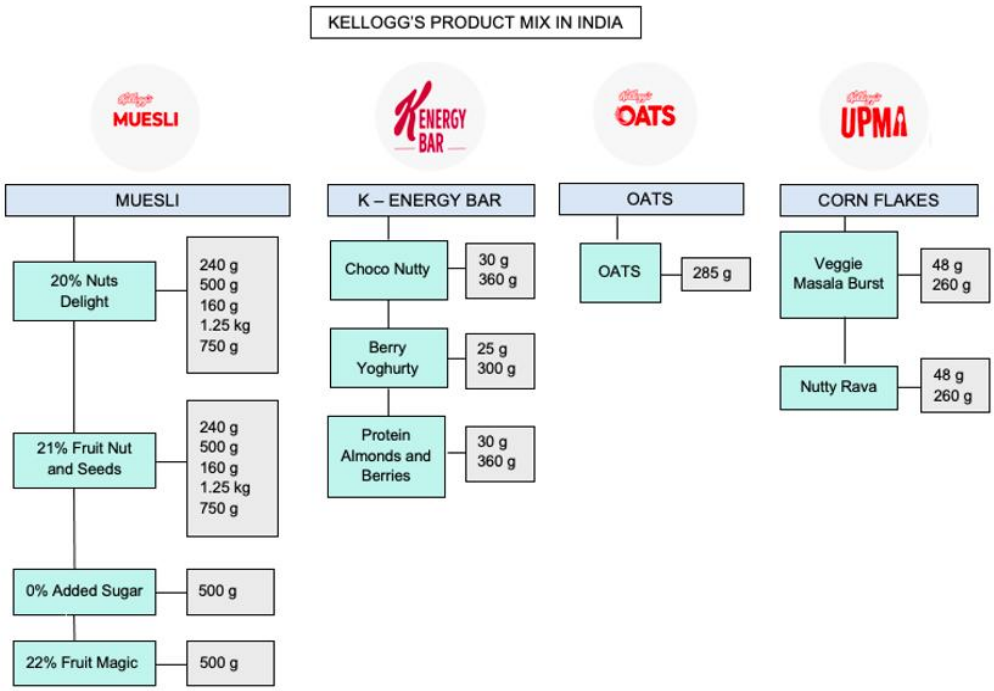

Figure 9 Product mix of Kellogg's India (*Kellogg's Products - Healthy, Fortified & Fibre Rich Cereals*, 2022b)

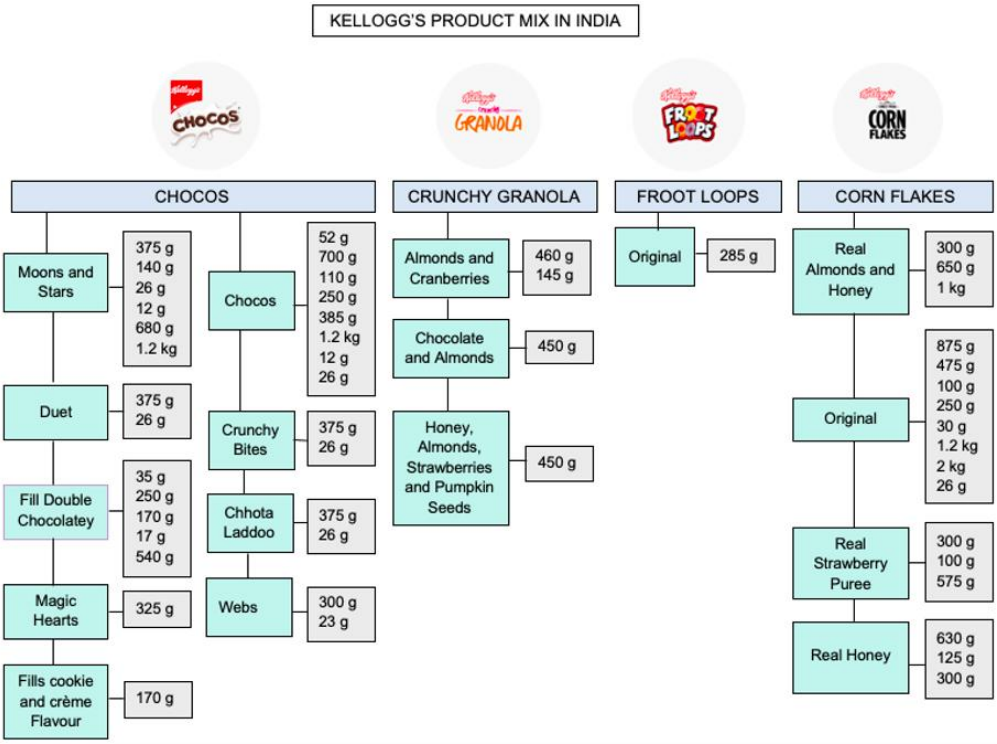

Figure 10 Product mix of Kellogg's India (Kellogg's Products - Healthy, Fortified & Fibre Rich Cereals, 2022b)

Kellogg's offers a variety of India-centric products. Kellogg's and Frosties were two of the first and most successful products at Kellogg's, because of which the market share and sales of Kellogg's saw a steep rise. Following their success, products like Mazza, Iron Shakthi, and Special K were introduced. Kellogg's positioned the product as a snack, which made it popular among children to consume after school or during a snack break.

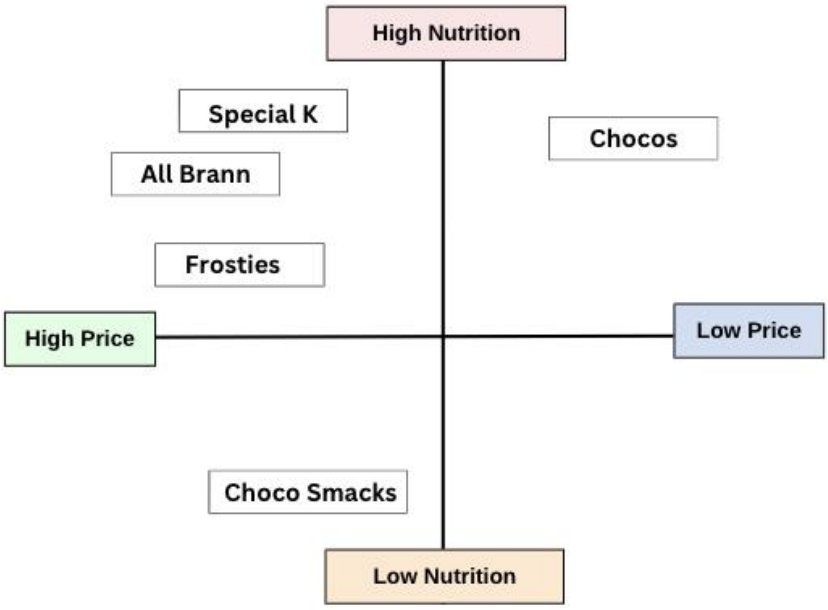

Figure 11 Perception map of Kellogg's India products (Burns, 2016)

Special K was one of the most successful products in the Indian cereal market. Special K, a $1.5 billion brand, launched in 2008 as a weight management cereal targeting women ages 20-44. It was a player in a Rs 500 crore weight management crore, Rs 750 crore convenience food market and Rs 250 crore breakfast market cereal. (Prachi Gupta et al., 2018) Chocos was one of the first products launched in India in 1996 to meet the nutritional needs of growing children.

Porter's Five Forces

Figure 12 Porter's five forces

1. **Threat of new entrants**

Multinational companies like Nestle and PepsiCo have entered the Indian market for potential growth. Customers can easily switch to better alternatives that introduce innovative products and offer a unique value proposition at competitive prices. The new innovative products by Nestle, like oat flakes, are a threat to Kellogg's. While Kellogg's uses corn, Nestle uses oats as a healthier alternative for flakes, increasing the demand for Nestle's products.

2. **Supplier Power**

There are numerous suppliers in the industry in which Kellogg's operates compared to other industries. This makes the bargaining power of the suppliers weaker. The products that suppliers provide are generally standard and less differentiated, so the suppliers have less control over the prices. Moreover, Kellogg's relies on more than 20,000 suppliers across the globe for ingredients, packaging, indirect services, and co manufacturing, so any increase in the cost of any supplies would not affect the firm's production. This makes it easier for the company to switch between suppliers at a low cost.

3. Competitive Rivalries

Kellogg's faces extremely high competition from its competitors like Nestle and Kwality. However, Kellogg's remains competitive in the market by offering a variety of products at competitive prices.

4. Threat of substitution

The risk of substituting products for Kellogg's is low, as Kellogg's has a huge product portfolio. However, health-conscious consumers are substituting ready-to-eat cereals like canola and corn flakes with healthier substitutes like smoothies. Bagrry's is considered a good substitute for Kellogg's. Bagrry's provides cornflakes at a lower unit price compared to corn flakes offered by Kellogg's.

Figure 13 Comparison between Kellogg's cornflakes and Bagrry's Cornflakes (*Compare Kellogg*, n.d.)

5. Buyer Power

The industry in which Kellogg's operates has few other firms. This indicates that buyers have a limited but competitive choice of options. However, the buyer's bargaining power is weaker. There is a high degree of product differentiation in the industry; different firms offer

different products, so it is hard for the customers to find an alternative firm that provides a similar product. For example, Chocos is an original brand of Kellogg's, and it is hard to find a similar-tasting alternative.

Kellogg's current presence in India

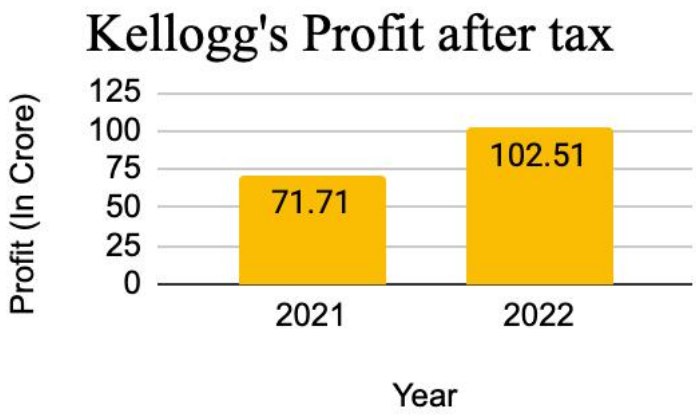

Figure 14 Kellogg's profit after tax in India (Kellogg India Revenue from Operations up 14% to Rs 1,332 Crore in 2021-22, 2022)

Kellogg's profit after tax in India in 2022 Rs. 102.51crore was increased by 42.94% from the year 2021 which recorded a profit of Rs. 71.71 crore. Kellogg's has been constantly building its brand and distribution. It continuously launched in the breakfast category, today it has sub-segments like Muesli, Granola, and Fills. Sumit Mathur (Senior director of marketing) declared that Kellogg's has increased the household penetration from 8% (June 2020) to 9% (June 2021) and 14% (June 2022). (Ambwani, 2022).

Kellogg's future vision in India

Kellogg's announced it would split into three independent public companies: Global Snacking Co, North America Cereal Co and Plant Co. The company CEO Steve Cahillane believes that if the company splits into two different businesses, each of the independent companies will have a better focus and it will enable them to direct their resources towards their distinct strategic priorities.

Kellogg's India will be a part of Global Snacking Co. Global snaking Co will focus on snakes with $11.4 billion in net sales. Nearly 60% of the net sales come from global snacks inclusive of brands like Pringles, Cheez it, Pop - Tarts, Kellogg's rice krispies treats, Nutri-Grain and RXBAR.

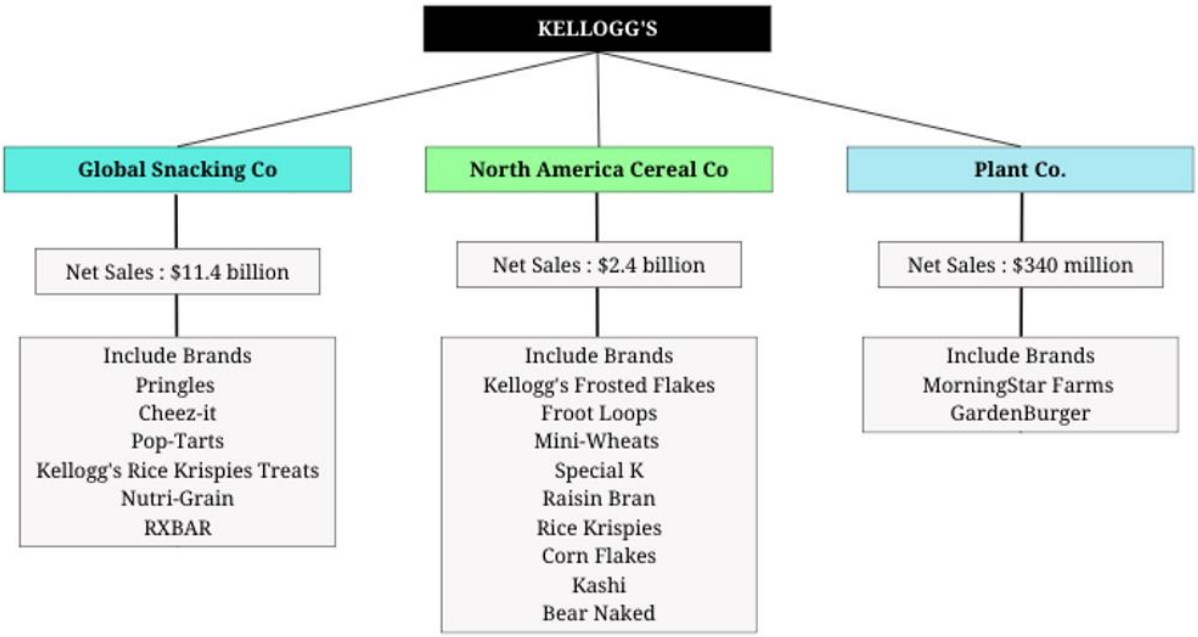

Figure 15 Separation of Kellogg's ("Kellogg India to Be Part of Global Snacking Co," 2022), (*KELLOGG COMPANY ANNOUNCES SEPARATION of TWO BUSINESSES as BOLD next STEPS in PORTFOLIO TRANSFORMATION*, 2022)

Kellogg's aims to double its business in India in the next 4 - 5 years with a growth of 20%. The company focuses on strengthening the breakfast cereal category by having a presence in the smaller towns and cities in India. The company is considering launching small packs with lower prices. Small packs, priced Rs 5 to Rs 99, currently accounts for 20 - 25% of its sales and the company aims to increase the sales to 35 - 40% in the same category.

Kellogg's has been conducting sampling at schools where the products are introduced to the children. It aims to continue the sampling method and take it to the rural areas. Manmeet Singh, associate vice president (marketing) of Kellogg's India, the sampling method in India is a great opportunity to help the breakfast cereal market double its revenues in India in the next 4 -5 years. Across the recent years, the Indian consumers are considering healthier breakfast choices hence presenting the company with a massive opportunity to grow its business.

For the growth of the company new variants according to the taste preferences and cultural preferences of the Indian consumers will be introduced. Kellogg's India currently is piloting cereal bars and will introduce it in the market after the company has sufficient data to analyze if it would be beneficial to launch the product.

The next factor it is considering for its growth is to scale up its direct distribution. At present there are 8 million FMCG (Fast moving consumer goods) outlets out of which 750,000 outlets stock breakfast cereals. Out of the 750,000 outlets Kellogg's India is able to provide service only to 600,000 outlets.

Conclusion

Kellogg's in recent years has been a market leader in the Indian breakfast cereal market. After its initial failure, it revised its marketing strategies and developed a unique product range to meet the Indian consumers' tastes and cultural preferences. Kellogg's has a first mover advantage and an opportunity to establish an additional revenue stream after the competition got tougher in its home country US. With its marketing strategies like improving distribution channel, diversifying product range, improving pricing strategies and doing promotional activities Kellogg's penetration increased from 0.01% of the 950 Million Indian populations to nearly 14% in 2022.

As my key finding, I found out that market research is a very important factor to consider when entering a new market. Without market research it is difficult to develop the right marketing strategies to market the product.

This essay highlights the importance of using different marketing strategies to a business. Due to its poor marketing strategies where it criticized the Indian traditional breakfast and launched the exact same products it produced in the US it resulted in bad word of mouth, decrease in the sales and a less rate of repeat customers. Even though Kellogg's had a first mover advantage, it was struggling to survive in India. Through this essay, it was indicated that marketing strategies could help a firm succeed or result in negative publicity; hence, marketing strategies are important to be correctly developed.

This essay addressed the research question "To what extent have marketing strategies of US based Kellogg's been successful to find a strong foothold in the traditional Indian

households". Developing effective marketing strategies contribute to the growth of a company. Kellogg's effective marketing strategies have contributed to Kellogg's success and it being the largest player in the Indian breakfast cereals market having more than 50% of share.
